If PP-00 is set to a non-zero number, parameter protection is enabled. You must enter the correct user password to enter the menu. To cancel the password protection function, enter with password and set PP.00 to 0. Parameters menu the user customizes are not protected by password. Group P and Group L are the basic function parameters, Group D is to monitor the function parameters.

The symbols in the function code table are described as follows:

“☆”: The parameter can be modified when the AC drive is in the either stop

or running state.

“★”: The parameter cannot be modified when the AC drive is in the running state.

“●”: The parameter is the actually measured value and cannot be modified.

“*”: The parameter is factory parameter and can be set only by the manufacturer. Users are not allowed.
